

Let's say cheers to Jan-Peter and to all our lives!

What I learned from JPT:

- Be curious about everything
- (Quantum-) Physics and Technology is great (being curious about the next big chapter: Quantum computing)
- Digitation and data are key (today we would say: machine learning and artificial intelligence)

What I understood at Max-Planck-Institute:

- Leave your comfort zone discovering an exciting future
- Forming of high-performance teams requires servant leadership
- If one door is closing for sure at least two new doors will open if you are open for change
- Openness for opposing opinions leads to the best results
- Stay to your values if you want to be yourself
- Trust in the future and trust yourself

What good friends in Göttingen and at other places have taught me:

... enjoy your life, respect the life of others ... it is great to feel the pulse and breath of nature and our planet.

Thank you, Jan-Peter, for the great time and the experience in Göttingen at Max-Planck-Institute 1988/89.

Congratulations on your 95th birthday!

All the best to you and your family.

Many greetings from southwest of Germany, Martin
