

Dear Peter Toennies,

I wish you all the best for your 95th birthday and for the birthday colloquium. Unfortunately I can't attend myself, but I'm sending you some nice souvenir photos, some from doctoral celebrations and from our "research camps" in Hardehausen.

After I left Göttingen, I worked at the Institute of Physical Chemistry at the FU Berlin, where I studied electrochemical processes at the atomic level. Later, I embarked on an entrepreneurial career and founded Chemie.DE (now LUMITOS AG), which today successfully operates and markets many portals in the fields of chemistry, life science and food technology.

Today I am very grateful for the wonderful time back then and the opportunity to learn so much in such a fruitful environment.

Best regards
Claus Schröter
